Application for the position as Software Engineer Backend

Dear Mr. Tesla,

I was thrilled to find the Software Engineer Backend role at Elli - a brand of the Volkswagen Group, and am excited to apply for the position. With my experience in web design, extensive programming knowledge, and love for technological innovation, I believe I would be an ideal candidate for your team.

As a longtime student of python backend programming, I have developed a unique perspective on software engineering, and I have learned how to be detail-oriented and analytical while solving complex problems with ease. In addition, my education in graphic design and experience in web design have allowed me to craft an excellent eye for aesthetics.

I have spent the past several years working hard to develop an impressive set of skills, amongst which are Python, PHP, and MySQL (just to name a few). Furthermore, my hobbies encompass music, games, reading, and travel which makes me a flexible and well-rounded individual.

In conclusion, I believe that with my technical skills and work experience, combined with my love for technological innovation and design aesthetics, I would be a valuable addition to your team. Thank you for considering my application.

Sincerely,

Adrian Radu
